

Global Soul

Global Soul is not a thing, a being, a person or creature, a model or system, a particular state of consciousness per se, but can be all of these inherently. It is not a lesson or subject that can be taught in a particular way. At best it teaches us. Because on a deeper level it signifies the sometimes, unseen and misunderstood evolving and dynamic process called life as we know and understand it to be.

It represents the manifestation of the more complex healing, learning, growth and evolution of our higher natures seeded in us at birth. Through its process we learn to understand not only the role that we play in this evolving dynamic but how our lives, relationships, events and conditions also influence its movement and directions.

Global Soul is the rhythmic, breath, spirit and pulse of the unfolding intelligence that governs the soul of this planet. It comprises all of the inhabitants: human, creature and plant, individually and collectively in its striving to awakening in 'us' a greater state of unity and taking our place in the fuller life, world and universe.
